Table 1: Result Summary

The following table summarizes all results from the event pertinent to an IB device.

Note: **Failing a beta test does not necessarily indicate a failure of the device under test.** There are several reasons that a device might fail a beta test that are beyond the control of the device manufacturer. Such reasons include unresolved problems with the OFED software, with other vendors' devices, and with the test plan procedures.

Table 2: Result Key

The following table contains possible results and their meanings:

Result:	Description:
PASS	The Device Under Test (DUT) was observed to exhibit conformant behavior.
PASS with Comments	The DUT was observed to exhibit conformant behavior however an additional explanation of the situation is included, such as due to time limitations only a portion of the testing was performed.
FAIL	The DUT was observed to exhibit non-conformant behavior.
Warning	The DUT was observed to exhibit behavior that is not recommended.
Informative	Results are for informative purposes only and are not judged on a pass or fail basis.
Refer to Comments	From the observations, a valid pass or fail could not be determined. An additional explanation of the situation is included.
Not Applicable	The DUT does not support the technology required to perform this test.
Not Available	Due to testing station limitations or time limitations, the tests could not be performed.
Borderline	The observed values of the specified parameters are valid at one extreme and invalid at the other.
Not Tested	Not tested due to the time constraints of the test period.

Mandatory Tests - IB Device Test Summary Results:

Test Number and Name	Part(s)	Summary Note(s)	Result(s)
Group 10.1: IB Link Initialize	Test #1	Phy link is established	PASS with Comments

Discussion:

Physical link initialization was verified between this device and every other device in the fabric. Link status was observed visually via status lights on the device. Port width and link speed was verified via ibdiagnet.

This version of the test plan does not explicitly demand a link to be at the proper speed, the next version will. Logo testing in the 2nd half of 2009 will require proper link speed between all link combinations. Narvi, Skoll, and the 12200 switch only link at SDR speeds even though they are rated to perform at speeds higher then SDR and the v4036 is a QDR switch.

Test Number and Name	Part(s)	Summary Note(s)	Result(s)
Group 10.2: IB Fabric Initialization	Test #1:	Port is Active with all SMs	PASS
Discussion:			
<p>The fabric configuration shown in Figure 1 was used for this test. 'ibdiagnet -c 1000' showed no Port error counters increment. Only one SM is run at a time. All switches are power cycled between SM trials. All links are validated via use of 'ibdiagnet' and 'ibchecknet' was used to verify that there were no duplicate guids. Refer to the table below for SM details.</p> <p>SMs tested include: <i>OFED OpenSM (SM Only)</i>, <i>QLogic 12200 (Managed Switch)</i>, <i>Mellanox MTS3600 (Managed Switch)</i> and <i>Voltaire v4036 (Managed Switch)</i></p>			

<i>F-X430044</i>	All ports Armed/Active	No Dup GUIDs	No Port errors
OFED OpenSM (SM only)	PASS	PASS	PASS
QLogic 12200 (Managed Switch)	PASS	PASS	PASS
Mellanox MTS3600 (Managed Switch)	PASS	PASS	PASS

Test Number and Name	Part(s)	Summary Note(s)	Result(s)
Group 10.3: IPoIB Connected Mode	Test #1	Automated Test Script	PASS
	Test #2	Automated Test Script	PASS
	Test #3	Automated Test Script	PASS
Discussion:			
<p>Test #1: An automated test script was used to send ICMP Echo Request packets with payloads of specific sizes between all hosts on the configured fabric. This procedure was repeated with each subnet manager independently managing the fabric.</p> <p>Test #2: An HCA was disconnected from the fabric and reconnected in a different location; the ICMP Echo Reply packets ceased while the HCA was disconnected, and then resumed when it was reconnected. This procedure was repeated once with each subnet manager independently managing the fabric.</p> <p>Test #3: An automated test script was used to transfer a 4MB file using the SFTP protocol between all hosts on the configured fabric. The file was transferred once in each direction between all hosts, and the contents of the file were verified after each transfer. This procedure was repeated with each subnet manager independently managing the fabric.</p> <p>SMs tested include: <i>OFED OpenSM (SM Only)</i>, <i>QLogic 12200 (Managed Switch)</i>, <i>Mellanox MTS3600 (Managed Switch)</i> and <i>Voltaire v4036 (Managed Switch)</i></p>			

Test Number and Name	Part(s)	Summary Note(s)	Result(s)
Group 10.4: IPoIB Datagram Mode	Test #1	Automated Test Script	PASS with Comments
	Test #2	Automated Test Script	PASS with Comments
	Test #3	Automated Test Script	PASS with Comments
Discussion:			
<p>Test #1: An automated test script was used to send ICMP Echo Request packets with payloads of specific sizes between all hosts on the configured fabric. This procedure was repeated with each subnet manager independently managing the fabric.</p> <p>The last packet size tested; 65507 bytes, was seen to lose the very first packet sent. This can be fixed by setting the systems qlen value to 18.</p> <p>Test #2: An HCA was disconnected from the fabric and reconnected in a different location; the ICMP Echo Reply packets ceased while the HCA was disconnected, and then resumed when it was reconnected. This procedure was repeated once with each subnet manager independently managing the fabric.</p> <p>Test #3: An automated test script was used to transfer a 4MB file using the SFTP protocol between all hosts on the configured fabric. The file was transferred once in each direction between all hosts, and the contents of the file were verified after each transfer. This procedure was repeated with each subnet manager independently managing the fabric.</p> <p>SMs tested include: <i>OFED OpenSM (SM Only)</i>, <i>QLogic 12200 (Managed Switch)</i>, <i>Mellanox MTS3600 (Managed Switch)</i> and <i>Voltaire v4036 (Managed Switch)</i></p>
